

CARACTERIZATION OF FOREST HABITATS WITHIN MAHIMBORONDRO PROTECTED AREA

ECOLOGICAL PARAMETERS

- Elevation
- Topographic level
- Orientation
- Exposition
- Slope

FLORISTIC PARAMETERS:

- Name of species
- Number of individus
- DBH
- Height

METHODOLOGY :

FLORISTIC INVENTORIES < SURFACIAL SURVEY

FOREST STRUCTURE STUDY < LINEAR SURVEY

PERSPECTIVES : STATISTICAL ANALYSIS

To understand / show the interaction :

- Habitat type – floristic composition
- Habitat type – structural variation
- Habitat type – ecological condition
