# Effect of habitat loss and fragmentation on highland central forest chameleons Case of the Special Reserve of Ambohitantely

#### **Background**

- Restricted distribution range
- Sensitive to forest disturbance

#### **Statistical question**

What is the relationship between species richness and fragments size?

#### **Mechanic question**

How does chameleons densities change over forest sizes?

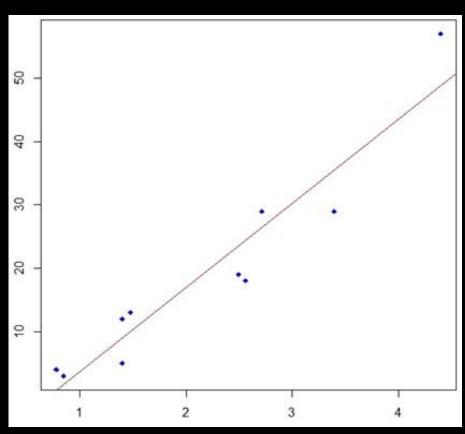

## **Statistical**

# What is the relationship between species richness and fragments size?

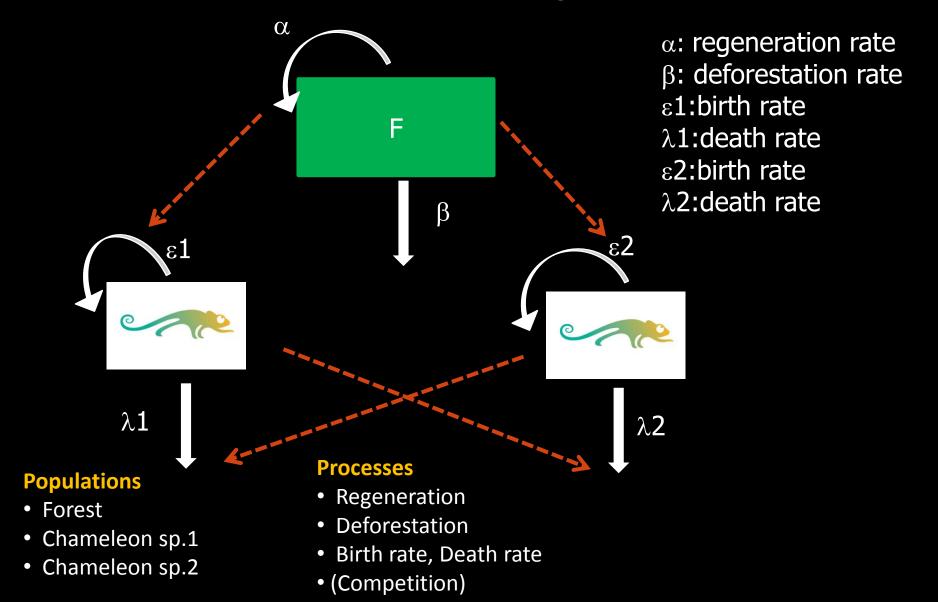

- Y :species richness
- X : fragments size
- Distribution: Poisson
- Link: Nat Log
- Function: Linear regression

Patch4 <- Im(Species richness ~ Fragments size, family='Poisson')</li>

## Mechanistic

How does chameleons densities change over forest sizes?

# **Next Step**

- Data collection in other patch of forest and Data analysis
- Examine the degree to which differences in species' traits can explain variation in response to habitat change
- Analyze the effects of forest fragmentation on genetic variability
